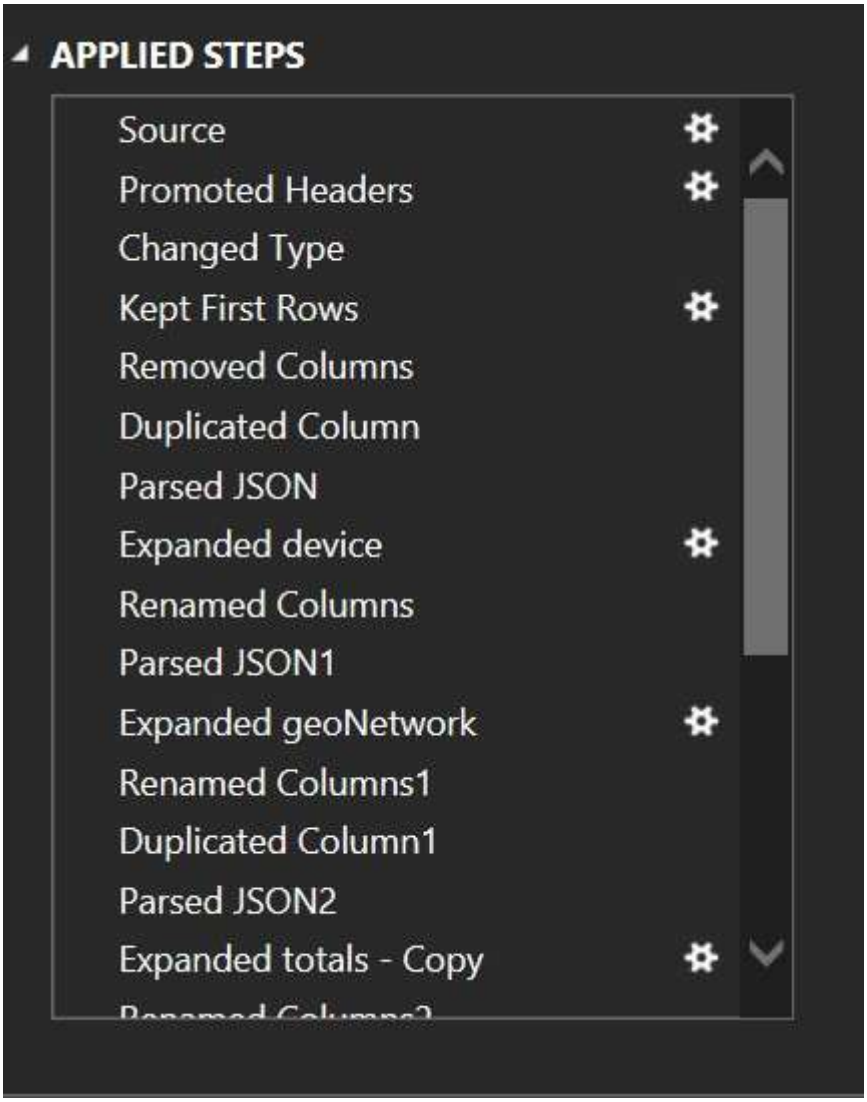
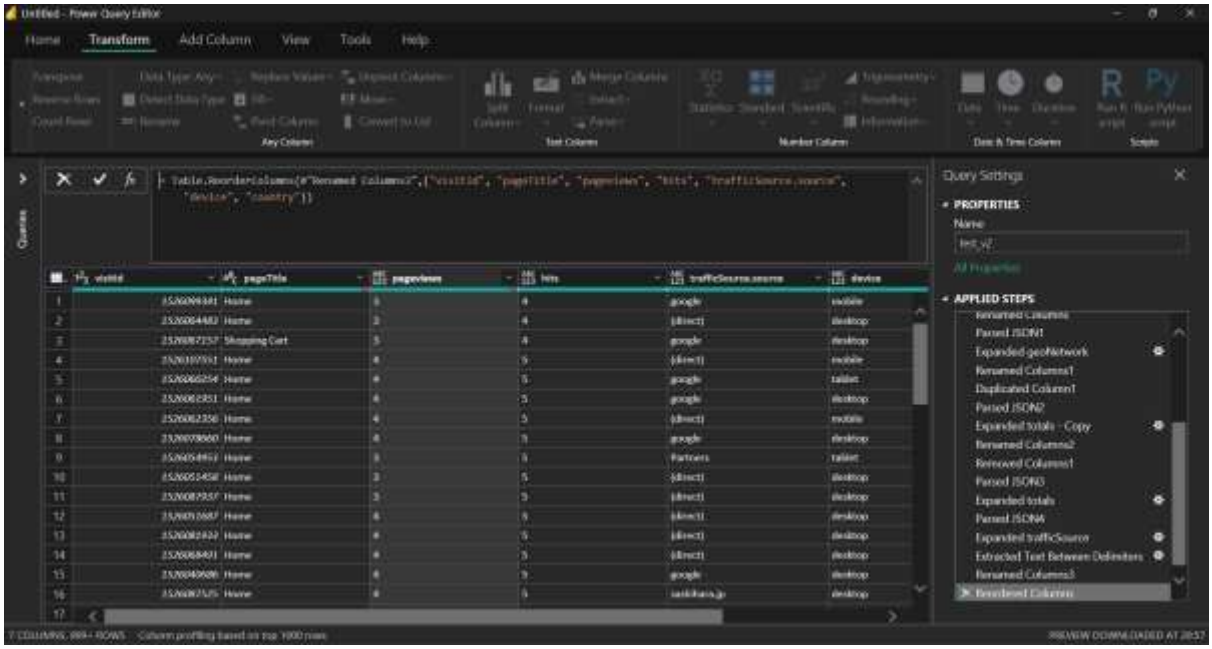
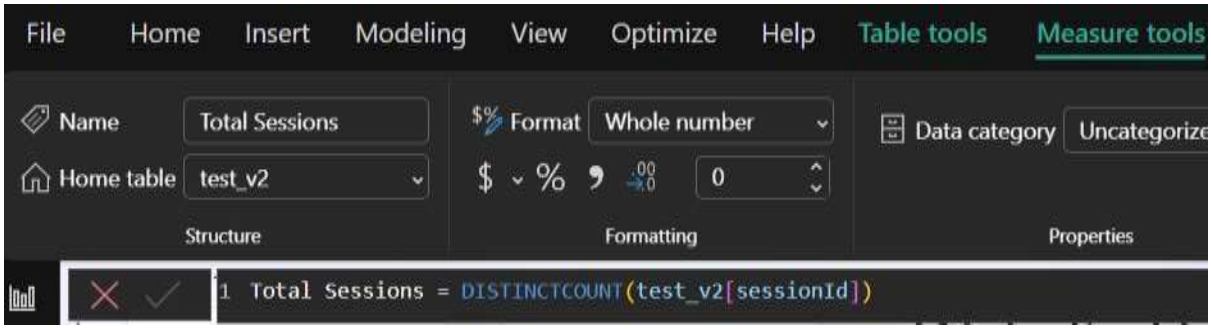
Steps applied to transform data:

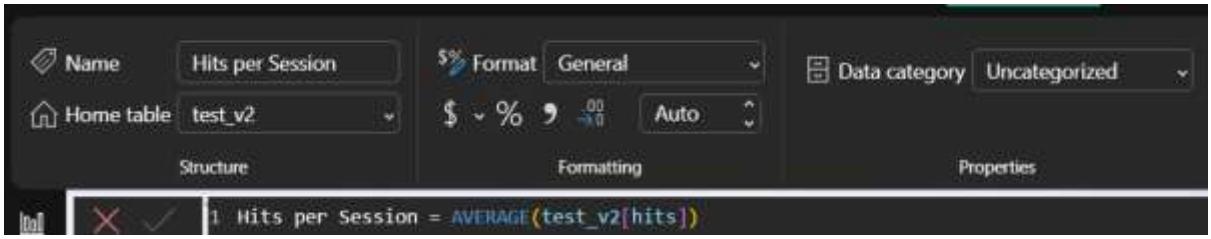


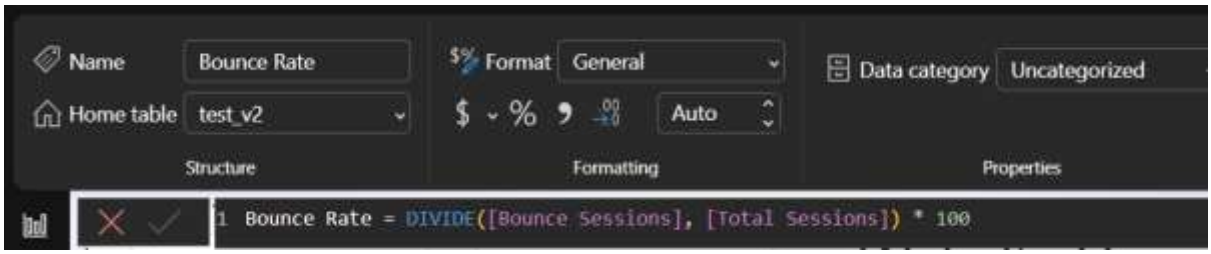
Cleaned data with only required fields:

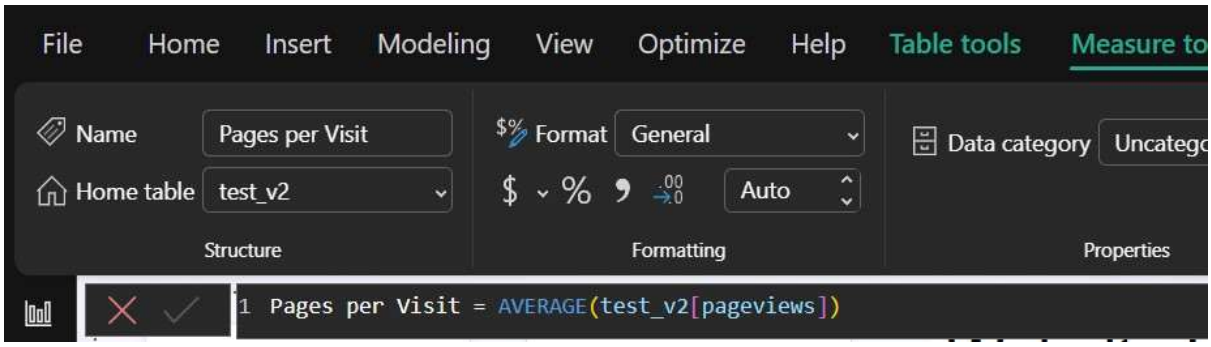


Additional measures were calculated using pre-given fields required for further analysis:

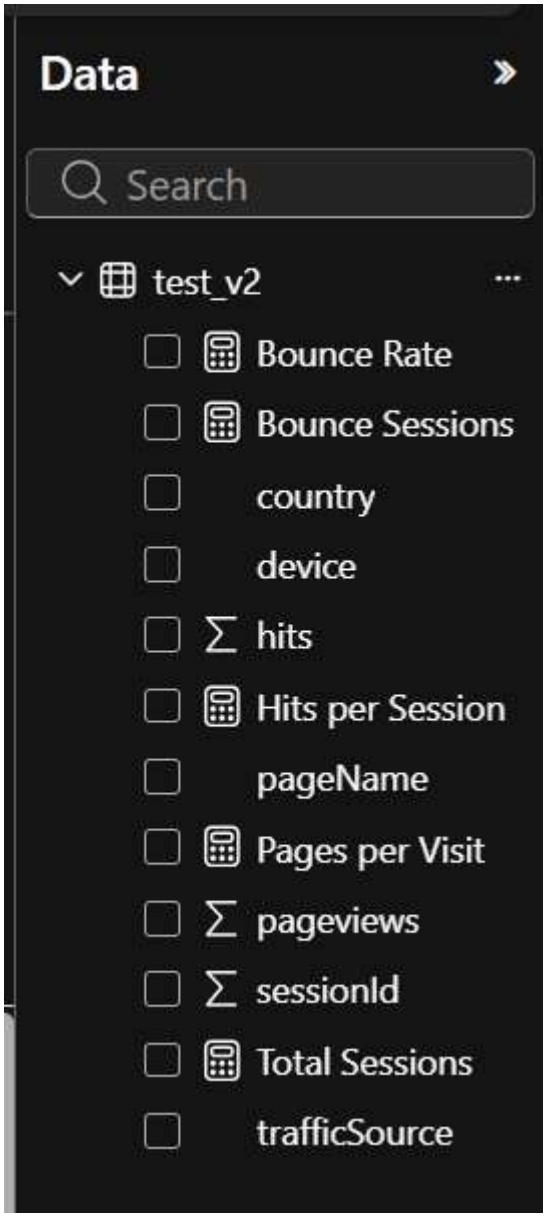


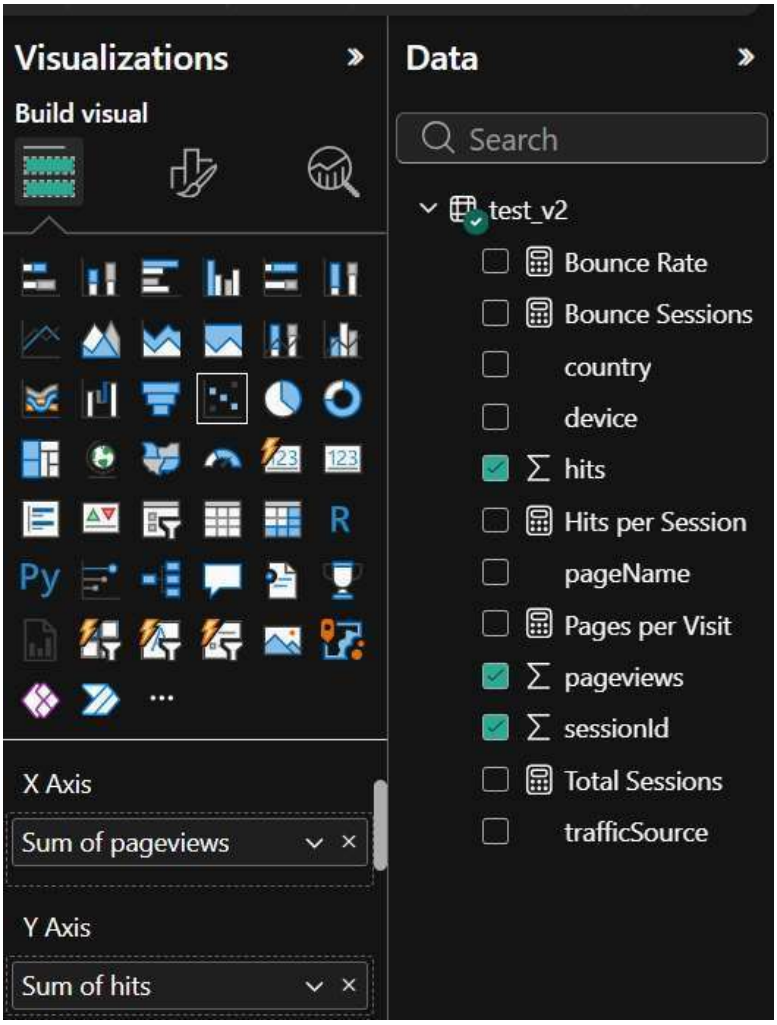






Final view of dataset with all required fields:





Using 5-6 visualizations like this, Dashboard was made:

Interpretation from dashboard:

- Google is the largest traffic source, contributing about 58% of sessions.
- Mail, referral, and display ads have higher bounce rates, meaning users leave quickly.
- Pages like Free, Account, and Home show very high bounce rates (90–100%).
- Mobile and tablet users have higher bounce rates (75–80%) than desktop users.
- United States, India, and the United Kingdom generate the most sessions.
- Higher pageviews lead to more hits, showing better engagement.

Actionable Strategies to Enhance Website Engagement:

- **Improve page content**: Ensure content is relevant, informative, and engaging to encourage users to explore more pages.
- **Enhance website navigation**: Provide clear menus and internal links so users can easily move between pages.
- **Optimize page loading speed**: Faster page loading improves user experience and reduces the likelihood of users leaving the site.
- **Ensure mobile-friendly design**: Optimize the website layout for mobile devices to improve usability.
- **Add clear call-to-action (CTA)**: Guide users to explore additional pages or perform actions such as reading more content or viewing products.
